Horizontal / Low Level silo's are fast becoming the preferred option for many operators and large international organisations alike. Popular for their truly mobile status ; mobilisation to fully operation within 4 hours of arrival @ site & low ground loading due to it's all round "skid" design. Manufactured from 5mm steel throughout supported on heavy walled box section give these units an incredible strength & durability ensuring clients investment is assured. Supplied fully dressed, compliant to current EPA & HSE regulations, and fully fitted with automated control station & compressor, power & location is all that the client has to supply.....

S N Engineering's flexible approach to clients requirements ensure limitations within the design brief can be accommodated without compromising the greater need, that of compliance. This flexible approach & well proven design & manufacturing process enables project specific units can be offered without the normal uplift in cost ; can be turned around quickly if required ; yet still maintain our quest for economical, soundly engineered & compliant equipment.....

Single units offer a Nom 45m³ of powder storage...

Why entrust S N Engineering...

- Full UK compliance...
- UK design...
- Proven track record...
- In House "dressings" for that complete supply...
- Units can be chassis mounted for that truly mobile plant...
- Units can be mounted on load cells for capacity &/or loss in weight monitoring.
