Please Enquire for details...

First 6 of 18 specially commissioned 82m² plants awaiting despatch from our Gloucester works. Client brief was to design a unit that offered a high filtration area but within a very small footprint & without compromising each units longevity in operation. Utilisation of highly efficient, yet durable, filtration media combined with a powerful reverse air blast cleaning system ensured S N Engineering met the clients brief without compromising compliance or quality of engineering.....

S N Engineering's flexible approach to clients requirements ensure limitations within the design brief can be accommodated without compromising the greater need, that of compliance. This flexible approach & well proven design & manufacturing process enables project specific units can be offered without the normal uplift in cost ; can be turned around quickly if required ; yet still maintain our quest for economical, soundly engineered & compliant equipment...
Single units from 24 to 250m² easily accommodated

Why entrust S N Engineering...

- Full UK compliance...
- UK design & built...
- Proven track record...
- Highly efficient medias used...
- Fan acoustics as standard...
- Powder coated finish as standard for max durability...
