Clients 1st batch of 22 (from 100) *Maxair* filters going thru production. These compact & low level silo venting, 24m², units offer the OEM clients an economical & well engineered solution to standard silo venting. Manufactured from heavy gauge St. St. throughout assures the client of thru' life durability. All working parts are enclosed within the unit & accessed via a hinged lid with the air tank also being hinged for ease of access to the 4 high efficiency, UK compliant, filtration elements.

S N Engineering's practical knowledge, gained over many years of direct involvement in silo venting, has assisted in the birth of the *Maxair*. These units have evolved thru' some 40 years of listening to clients requests & changes to legislation. This flexible approach in conjunction with our well proven design & manufacturing process resulted in a compact ; low level ; easily maintained ; durable & long lasting silo vent filter without compromising our quest for economical, soundly engineering & compliant equipment.....

.....*Maxair 24*, the ideal & economical solution for the OEM market.

Why entrust S N Engineering...

- Full UK compliance...
- Proven track record...
- Highly efficient medias used...
- Low capital costs, appeals to the conscientious OEM.
- Low thru' life costs, appeals to the plant end user.
- Well engineered & manufactured, thus appealing to both the OEM & end user.
- Units held in stock for those emergency requirements.
